essentials for childhood

The influence of adverse childhood experiences (ACEs) and positive childhood experiences (PCEs) on Washoe County substance use

Findings from the 2023 Nevada Middle School YRBS (n = 1,978)

ACEs are potentially traumatic events that occur before the age of 18 years. ACEs include abuse, neglect, and household challenges. Middle school youth who have more ACEs often have more negative health outcomes, including substance use.

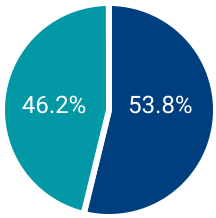
essentials for childhood

PCEs

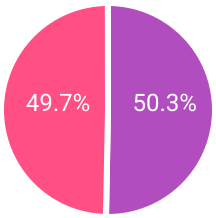
PCEs are positive experiences during childhood, including having safe, stable, nurturing relationships and environments. In the 2023 YRBS, youth were asked six questions covering family communication and school connectedness. An average family communication and school connectedness score was calculated and youth with scores higher than the average score were categorized as having high PCE exposure.

Prevalence of Family Communication and School Connectedness Among Washoe County Middle School Students



Family Communication

- High Family Communication
- Low Family Communication



School Connectedness

- High School Connectedness
- Low School Connectedness
